

Safety Policy

At Usina Coruripe, human beings are a more important asset than the company's objectives or goals. Nothing can take a more outstanding position here than the integrity of our staff and no critical or productive situation may serve as an argument for us to act recklessly.

This company is responsible for making feasible all the necessary resources for our tasks to be carried out safely. It is up to us, as a whole, to follow both legal and internal standards and regulations in order to safeguard people's lives while looking after our working environment.

All those working in a specific area are the responsibility of the leader of such workspace. It is he or she who must always promote a safe behavior, along the established standards and regulations, and also encourage everyone's participation for the elimination of potential risks..

The workplace safety team will always provide support during the preventive briefings given to the staff and will mainly act as technical advisers alongside the leaders..

Each member of the staff has the responsibility of always keeping a safety-first attitude towards themselves, their co-workers and every other person in their workspace..

Suppliers, contractors and third parties must fully abide by all safety regulations and guarantee, apace with their staff, the carrying out of work in entirely safe conditions.

The continuous search for an accident-free environment must be a conviction of all those who labor in this enterprise, regardless of the role or position they hold. Furthermore, a safe behavior must be incorporated as an everyday habit in everyone's lives anywhere they may be.
